I am sorry for bothering you again. However, there is some additional information that can contribute to my application. I am writing them all below.

Could you please provide me with any help and consider these as well as a part of my application?

I, with my team of other 3 programmers, were working on a new project called AirPilot. AirPilot is a mobile game application that was created to revolutionize people's understanding and knowledge of Aerospace technologies and to propel the Aerospace industries of not only Uzbekistan but also Central Asia. In the mobile application, people can learn to create and even fly various aviation devices, such as drones, planes, helicopters, and even rockets in the real simulated landscapes of Uzbekistan. Our main aim is to integrate this mobile application into Uzbekistan's school curriculum initially to get more and more students engaged and to increase their interests in this sphere. In December, we won a National Programming Championship - President.Tech.Award - where we competed over 4000 teams around Uzbekistan. Currently, we are working on this project with the experts of Google and PlugAndPlay to enhance the quality of our program at the global level.

Additionally, since I submitted my application, I have taken and completed a few more courses to enhance my expertise in Backend Development and Data Science and acquired certificates acknowledging my proficiency.

Udemy: "100DaysOfCode: Complete Python Pro Bootcamp 2023"
Udemy: "Complete A.I & Machine Learning, Data Science Bootcamp"
EDx: "Machine Learning With Python"

I uploaded the certificates as proof of my achievements.
